

eGoWorks™ — an integrated solution for endoscopy.

eGoWorks™ is an online data storage and collaborative site for endoscopists. In an online environment, the user can upload, store, manage, manipulate, and share endoscopic exam findings.

Using eGoWorks™ with its desktop companion, eGo™ Manager allows for full integration of data acquired with the endogo® to be transferred and stored without the cumbersome steps currently needed to capture and store endoscopic images.

Some features of the online service include:

- File endoscopic exams based on patient demographics.
- Annotate exams, search based on key words.
- Create reports, edit video, analyze video with frame by frame control.
- Share endoscopic images and video in an online, secure, HIPAA environment.

View multiple images, video, and CT scan images with the eGoWorks™ compare feature.

medical technologies

Store

- Store information automatically and securely through eGoWorks™ software.
- Eliminate cumbersome tasks related to traditional cart based systems.

By clicking on "Share" the user can send a secure link to an image or video with a message to a referring physician or colleague.

Share

- Automatically upload using eGoWorks™ software to streamline workflow. Eliminate redundant tasks normally associated with moving endoscopic data: capture, enter demographic data, export.
- Use the web based data management and storage solution to share and access the data anytime, anywhere.
- Stay connected on the go using the eGoWorks™ iPhone application. Features include:
 - Access patient files to view and send images or video.
 - View patient scheduler to add or remove patients.

The patient scheduler allows the user to search, add or remove patients. This feature automatically pushes patient files to the eGo™ which eliminates redundant tasks related to patient data entry.

"eGoWorks™ is a remarkable product. For the first time as an endoscopist, I can capture images and video and efficiently store and manage the data in an on-line environment.

This is a product that is long over due. Current procedures for capturing, annotating, storing, and sharing endoscopic findings have been extremely burdensome and disruptive to work flow or non-existent. Patients love being able to see all of their previous exams in one place during the exam visit: being able to compare current and past exams helps them understand their disease process and enhances compliance. Sharing exams with consulting physicians with the secure on-line sharing feature is a significant practice enhancer. This facilitates physician-physician communication and collaboration.

While it may seem obvious, the secure Internet, anywhere access provides an integrated "systems solution" to my private practice that is typically found in larger integrated health care/ academic systems. Having access to a patient's endoscopic examination in either of my practice locations or prior to an operative procedure in the OR is extremely valuable."

—Dr. Patrick Melder, Otolaryngologist and surgeon inventor
